

IDIS/Web Tip

Erratum

How can I find if an article has an erratum or other type of correction?

The *IDIS* database allows you to find corrections to the original articles already in the database. The corrections are submitted by the original author(s) or the journal publisher. Articles that contain corrections have *CORRIGENDUM Z100*, as an *IDIS* disease term. The corrigendum term includes articles that are erratum, addendum, retraction or note of plagiarism. The type of correction is listed in the title field followed by the article number for the original article or correction.

For example:

Article Number: 384000

Title: THE BRITISH GUIDELINES ON ASTHMA MANAGEMENT. 1995 REVIEW AND POSITION STATEMENT (ERRATUM) (MN 389227)

In this example the original article is 384000 and the erratum is article 389227.
