

The *Iowa Drug Information Service* database consists of indexed records to drug and drug therapy articles from over 200 leading English language medical and pharmaceutical journals. Authoritative publications have been selected to provide broad coverage of both general and specialty areas of pharmacy and medicine. The Indexes are available on Web and CD-ROM from 1966 forward through SilverPlatter Information Inc. and are compatible with *IDIS* for article review.

**MONTHLY UPDATES:** The system is continuously updated with approximately 1,700 new journal articles added each month. The Index is cumulative from 1966 and contains over 420,000 indexed journal articles.

**EASY SEARCHING:** The database uses controlled drug, disease and descriptor vocabularies, and searching by pharmacological drug categories is also possible. A thesaurus of drug and disease descriptors cross-referenced to trade names, synonyms, code designations, inverted names and abbreviations is provided with the database. The names of drugs and diseases are kept current even as they change over time, as the indexes are revised frequently. The citation information for each article includes title, author(s), journal name, volume, issue number, pages, publication year and an article number.

Each article, in addition to the detailed citation information, is indexed with descriptors that identify the article's classification, design/analysis features, and results. It also identifies pharmaceutical information and clinical therapeutic information such as administration routes, pharmacokinetic data, patient outcomes, clinical incompatibilities and interactions, side effects and adverse reactions by organ system, and toxicological information. These descriptors are also cross-referenced in the Thesaurus to their synonyms and abbreviations. Through these features, the user can locate the needed information quickly and easily.

**SUBSCRIBER SERVICES:** A subscription to *IDIS/SilverPlatter* includes the database indexes with twelve updates per year, SilverPlatter Information Retrieval System (SPIRS) software for the IBM or compatible, on-disc help screens and database guides, comprehensive printed documentation, toll-free technical support and a subscription to *The SilverPlatter Exchange Newsletter*.
